MSC #466, Pasadena, CA 91126-0466

## Education

### California Institute of Technology

*Electrical Engineering with a minor in Computer Science, GPA: 4.0*

**Pasadena, CA**

*Oct. 2012 - present*

- **Selected Coursework:** Senior Thesis (MICS Lab), Machine Learning and Data Mining, Algorithms, Computing Systems, Embedded Systems (FPGA Oscilloscope), Advanced Digital Systems (AVR Processor in VHDL), Mixed-mode Integrated Circuits, Feedback and Control Circuits, Signal-Processing Systems, Combinatorial Analysis, Stochastic Processes, Discrete Differential Geometry, Quantum Computation
- **Activities/Awards:** ACM-ICPC (international collegiate programming contest - leader of Caltech group and member of **1<sup>st</sup> place team** at regionals, *2015*; **4<sup>th</sup> place team**, *2014*; **3<sup>rd</sup> place team**, *2013*), The Kiyo and Eiko Tomiyasu SURF Scholar award (Caltech, *2015*), member of Tau Beta Pi honor society

### Thomas Jefferson High School for Science and Technology

*Senior Research in Computer Science, GPA: 4.45*

**Alexandria, VA**

*Sept. 2008 - June 2012*

- **Activities/Awards:** Computer Team (co-captain, *2010-12*), USACO (contest programming, Platinum), ACSL (CS topics, **1<sup>st</sup> place individual**, *2010-11*), Naval Research Lab (**1<sup>st</sup> place project in CS**, *2011*)

## Work and Experience

### Caltech (Azita Emami MICS Lab), *Named Summer Undergraduate Research Fellow*

*Summer 2015*

- Designed and simulated a novel PLL-based potentiostat for measuring dopamine concentrations *in vivo*.
- Used Cadence Virtuoso with 45nm CMOS predictive models.

### Jane Street Capital, *Software Developer Intern*

*Summer 2014*

- Completed two projects - (1) fault-tolerant distributed lock server to replace NFS locks; (2) plugin support for the internal trader tool as well as a plugin ecosystem for trader developers with version control.
- Used OCaml (including the Async monad, RPCs, DynLoader).

### Google (Research Division), *Software Engineering Intern*

*Summer 2013*

- Developed image processing techniques to clean a sequence of object photos to QA specifications, allowing for a much larger class of object image sequences to be processed; currently for Google Shopping.
- Used C++, OpenCV, and the Ceres non-linear solver library.

### Naval Research Laboratory, *Intern, High Performance Computing*

*Summer 2011, 2012*

- *Summer 2012:* Built a molecular dynamics simulation in C; compared different integration step algorithms including brute force, linked cell, and monotonic Lagrangian grid.
- *Summer 2011:* Created an MPI (Message Passing Interface) library for parallel operations on a grid in C++, tested on a wave propagation simulation, then analyzed its efficiency.

### California Institute of Technology, *Teaching Assistant*

*2014, 2015*

- *Algorithms:* Lectured and created course materials for topics including graph algorithms, greedy algorithms, dynamic programming, flow networks, and linear programming.
- *Electronics Laboratory:* Conducted homework and laboratory sessions in topics including discrete analog components, op-amp circuits, and differential amplifier circuits.

## Projects

### Potentiostat utilizing an all-digital phase-locked loop in 45nm CMOS technology

*Summer 2015*

### Solid-state Tesla coil, built from scratch

*Summer 2015*

### 6-8 GHz all-digital delay-locked loop in 45nm CMOS technology, *group project*

*Spring 2015*

### 8-bit AVR-compatible processor in VHDL for a Xilinx FPGA, *group project*

*Winter 2015*

### Differential geometry algorithms: mesh smoothing, flattening, surface flow

*Fall 2014*

### 3-stage BJT amplifier with flat 40dB gain from 10Hz to 200kHz, *group project*

*Spring 2014*

### FPGA-based oscilloscope, designed and built from scratch

*Spring 2014*

### Robotribe firmware (interrupt-based OS written exclusively in x86 assembly)

*Fall 2013*

## Tools and Languages

C/C++, Java, Python, OCaml, Haskell, VHDL/Verilog, x86 Assembly, L<sup>A</sup>T<sub>E</sub>X, Mathematica, Git, Bash, OpenCV, MPI (parallelization platform), Altium, Altera and Xilinx toolchains, Cadence Virtuoso
